

# NM 14 and Bonanza Creek Road Safety Study

## Final Report

August 2024

Prepared for:

Prepared By:

# **EXECUTIVE SUMMARY**

The following report summarizes a safety study of a two-way stop-controlled intersection of Bonanza Creek Rd (NM 45)/Shenandoah Trail (NM 44) with NM 14 located in Santa Fe County, NM. This study responds to community concerns regarding stop control compliance and potentially unsafe vehicle speeds at the intersection. This effort aims to identify safety deficiencies and challenges for intersection users. After assessing traffic operations and safety conditions, safety mitigation strategies are recommended.

## **SUMMARY OF OBSERVED SAFETY CHALLENGES AND RECOMMENDED COUNTERMEASURES**

Community concerns expressed about the study intersection were primarily concerned with stop signs and speed limit compliance. During this study, several factors that likely contribute to these safety issues were identified; specifically, regulatory and warning signs were located far from the roadway's travel lanes and were partially obscured by foliage in certain locations. Lateral spacing and clear lines of sight also affected the prominence of stop signs on the east and westbound approaches. Finally, roadway striping and stop lines could be improved to promote driver awareness at the intersection.

Near to mid-term safety mitigation strategies are as follows are listed below, separated into implementable and maintenance recommendations:

### Maintenance Recommendations:

- Foliage along shoulders should be regularly cut back and trimmed to maintain the visibility of regulatory and warning signage.
- Periodic speed enforcement operations may be warranted to help raise speed limit compliance on the approaches to the study intersection.

### Implementable Recommendations

- The intersection is best served by Two-Way Stop Control.
- The stop signs facing the east and westbound approaches should be relocated to provide a 6-foot lateral offset from the outer edge of the travel lane.
- The Stop Line should be replaced with a 2-foot-wide thermoplastic line and relocated to provide a 10-foot lateral offset from the outer edge of the NM 14 through the travel lane.
- The outer edge white and yellow centerline/median lane stripping on the intersection approaches should be replaced with 6-inch-wide thermoplastic stripping, and the yellow-striped median should be diagonally striped to raise its visible profile.
- The regulatory (Speed Limit) and warning (Stop Ahead) sign lateral offset from the outer lane edge striping should be no greater than 12 feet.
- Regulatory (Speed Limit) and warning (Stop Ahead) signs on NM 14 should be replaced with larger versions.

In the long term, it is recommended that the County of Santa Fe coordinate with the NMDOT to provide shielded intersection lighting that meets the intersection's safety needs while maintaining the area's rural character and does not intrude onto neighboring properties.

The planning level estimate for implementable recommendations is shown below.

*Table 1: Observed Challenges and Recommended Safety Countermeasures Summary*

Observed Challenge	Countermeasure	Included Items	Opinion of Probable Cost	Opinion of Total Probable Cost	Priority
Stop Sign and Speed Limit Compliance	Replace Stop Line and Lane Striping with Wider Thermoplastic Markings	6-Inch Thermoplastic Lane Striping 24-Inch Thermoplastic Stop Lines STOP AHEAD Thermoplastic Pavement Markings	\$9,500.00 \$1,225.00 \$1,800.00	\$24,175.00	1
	Replace and relocate Regulatory and Warning	New Larger Regulatory and Warning Signage Steel Post and Base for New Signage	\$4,400.00 \$7,250.00		
No Intersection Lighting	Coordinate with NMDOT to Install Appropriate Lighting Solution	2 Lighting Poles with shielded LED Luminaires	\$20,000.00	\$27,400.00	2

From Table 6, the cost of mitigation measures to address Stop Signs and Speed Limit compliance is estimated at \$24,175.00, and the installation of intersection lights for two lighting installations is approximately \$27,400. The total estimated cost for both countermeasures is \$51,575.00.

## ADDITIONAL SAFETY MITIGATION MEASURE OPTIONS

In addition to the safety mitigation measures recommended above, there are more robust mitigation options that address the stop sign compliance issue. These additional mitigation measures are Flashing Solar LED Traffic Signs and Transverse Rumble Strips (TRS).

Flashing warning or regulatory signs can be substituted for the existing Stop Ahead (W3-1) warning sign or for the Stop Sign (R1-1) on the east and westbound approaches to the study intersection to increase their visual prominence beyond the effect of the recommended relocation. If flashing warning signs are to be implemented, they should be located 6-12 from the outer edge of the travel lane per the MUTCD. Flashing solar versions of the standard regulatory and warning signs are commonly available. Please be advised that these flashing signs are accompanied by an increased environmental impact in the form of light pollution.

Transverse Rumble Strips, if implemented, should be located and constructed per NMDOT Standard Drawing 631-07-1/1. If TSRs are to be implemented, please be advised that they are also accompanied by an increased environmental impact in the form of noise pollution.

# INTRODUCTION

Responding to community concerns, the County of Santa Fe has identified the intersection of NM 14 and Bonanza Creek Rd as presenting safety issues for the community. Concerns identified by the community included high travel speeds on both NM 14 and on the minor approaches of Bonanza Creek Rd (NM 45) and Shenandoah Tr (NM 44) and poor stop control compliance on the minor street approaches to NM 14. In response to these concerns, the County of Santa Fe has commissioned Lee Engineering to conduct a Traffic Safety Study.

The following report summarizes the findings, results, and recommendations of the Traffic Safety Assessment conducted by Lee Engineering. The assessment was comprised of the following:

- A field visit was performed to document existing conditions such as lane configurations, lines of sight, and traffic control device condition and location and to observe traffic flow and driver behavior.
- Traffic data was collected to ascertain vehicle turning movement counts at the intersection and the speed and vehicle classification data from the NM 14 main thoroughfare.
- A crash data review was carried out for the most recently available accident data, which covers the five years between 2018 and 2022. This includes an in-depth review of all relevant individual crash reports.
- Traffic control warrants were conducted for Two- and Four-Way Stop Control and Traffic Signal Control types.

Following these assessment efforts, Lee Engineering has compiled a series of non-prescriptive safety mitigation strategies for the County of Santa Fe and community stakeholders to consider. These mitigation strategies accompany planning-level cost estimates for implementation. The following is a brief description of the study area and roadways.

## STUDY AREA

The study area is in Santa Fe County, NM, roughly 5 miles southeast of Interstate 25. The area surrounding the study intersection is rural in character. It is predominately zoned as RUR-R Rural Residential with a small zoning allocation on the south side of the intersection for CN Commercial Neighborhood. The RUR-R Rural Residential zoning designation entails large-lot single-family housing and a mandate to preserve the scenic and rural character of the County. The large lot residential development pattern results in lower-density automobile and pedestrian traffic. While low-density traffic feels preferable to drivers, it often results in higher speeds and lower compliance with safety measures. As Lee Engineering considered and selected mitigation measures to address speed and compliance issues, preserving the area's character was a guiding principle. The study intersection and surrounding area are shown below in Figure 1.

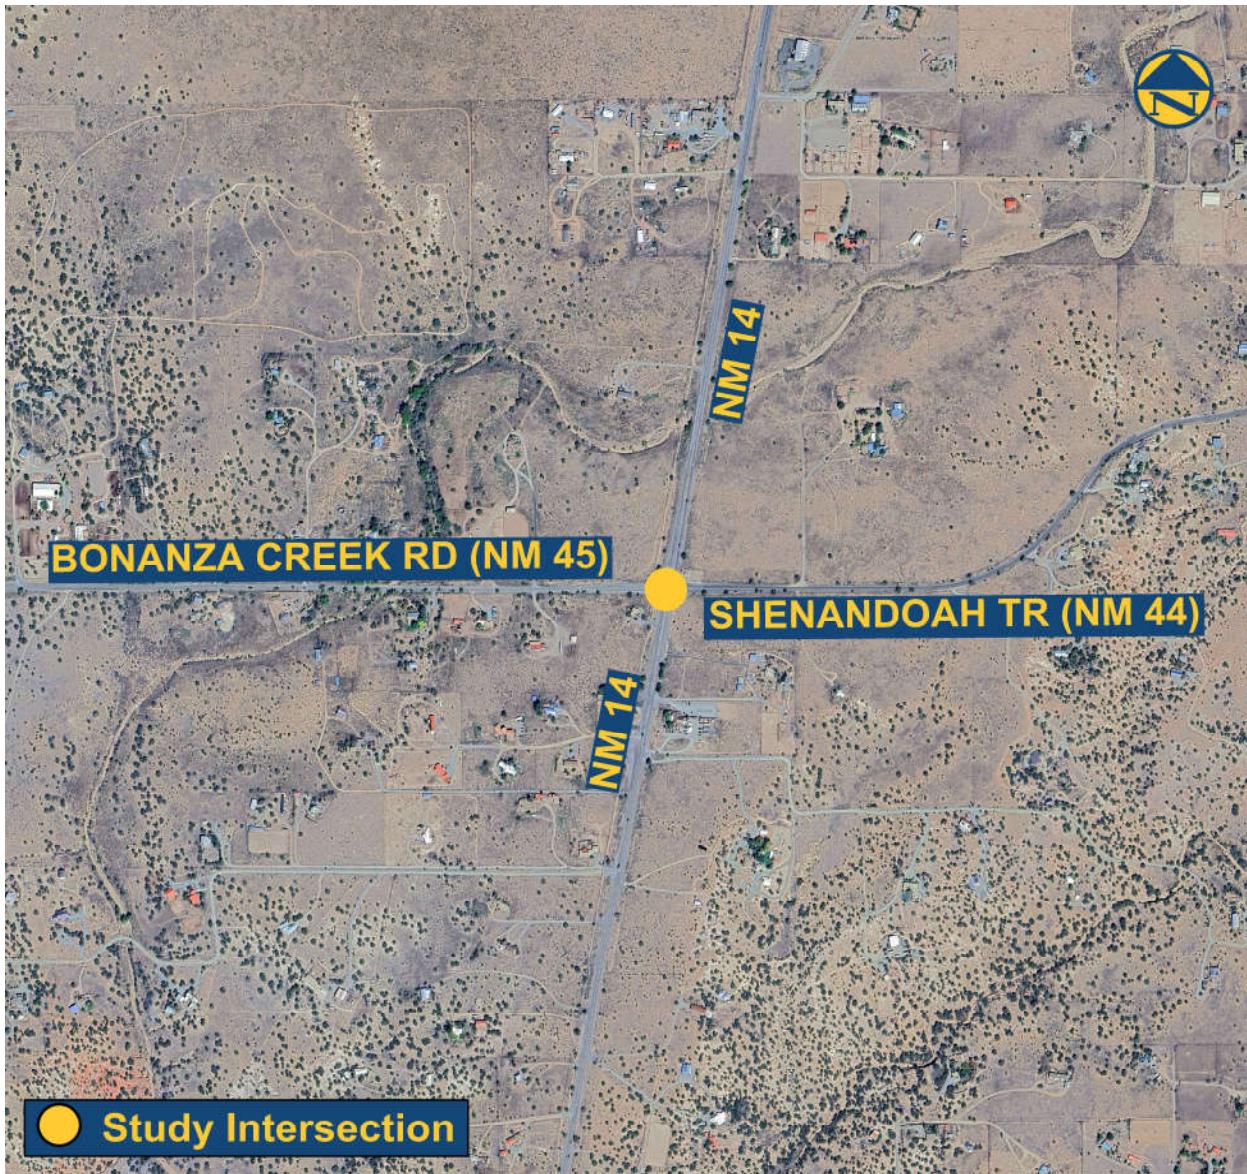

Figure 1: Study Area

The following details the existing roadway characteristics observed from aerial imagery and Lee Engineering's in-person field observations.

## ROADWAY CHARACTERISTICS

This study considers Bonanza Creek Rd, NM 14, and the intersection of Bonanza Creek Rd and NM 14. The following describes each roadway's functional classification, posted speed limit, and other characteristics pertinent to assessing its traffic operations and safety.

The Highway Functional Classification system categorizes roadways based on their degree of access or travel mobility. These classifications include arterials, collectors, and local roads. Arterials move high volumes of vehicles and are used for longer trips. Arterials are further subdivided into three categories by the NMDOT. These categories are Principal Arterial – Freeways or Expressways, Principal Arterials – Other, and Minor Arterials. Collectors are also split into major and minor collectors and act as transitional roads

between arterials and local roads. Local roads have low mobility and travel at lower speeds but have high land access.

**Shenandoah Tr /NM 44** is classified by Santa Fe MPO as a minor collector roadway running primarily east-west with a speed limit of 35 MPH. It is an undivided two-lane roadway consisting of one 11-foot lane in each direction. Travel lanes are delineated via double-yellow center line stripping and single-white edge line stripping. The lane stripping's condition showed signs of wear and age. No bicycle or pedestrian facilities are present.

**Bonanza Creek Rd/NM 45** is classified by Santa Fe MPO as a minor collector roadway running primarily east-west with a speed limit of 35 MPH. It is an undivided two-lane roadway consisting of one 11-foot lane in each direction. Travel lanes are delineated via double-yellow center line stripping and single-white edge line stripping. The lane stripping's condition showed signs of wear and age. No bicycle or pedestrian facilities are present.

**NM 14** is classified by Santa Fe MPO as a major collector roadway running north-south with a speed limit of 45 MPH. It is an undivided two-lane roadway with one 12-foot lane in each direction. Travel lanes are delineated via double-yellow center line and single-white edge line stripping. The lane stripping's condition showed signs of wear and age. No bicycle or pedestrian facilities are present.

The study intersection is a two-way stop-controlled intersection with no pedestrian or bicycle facilities. The eastern and western legs of the intersection consist of a dedicated left-turn lane and a shared through/right-turn lane. The northern leg of the intersection consists of a left-turn lane, a through lane, and a right-turn lane, while the southern leg consists of a left-turn lane and a shared through/right-turn lane.

## FIELD VISIT AND OBSERVATIONS

Lee Engineering conducted field observations on Thursday, July 18<sup>th</sup>, 2024. The project team observed roadway conditions and traffic behavior, focusing on the community's noted issues with travel speeds and stop control compliance. While the observations were not limited to these issues, they focused on the possible causes and contributing factors that lead to the problem driver behaviors noted by the community.

Specific factors of interest related to the reported problems were the condition and visibility of stop and speed control devices, i.e., signing, stripping, and lighting. In addition to these relatively quantifiable factors, the overall driving experience was assessed to determine if roadway factors such as perceived roadway width, openness, and straightness contributed to problematic inappropriate driver behavior. The following observations were documented.

## INTERSECTION LIGHTING

The intersection is unlit. This is consistent with the area's zoning's intention of maintaining a rural character, but it presents safety concerns. The Safety Mitigation section of this report will discuss lighting options that fit with the location's nature. Because of the absence of nighttime illumination, all the following observations related to visibility are applicable to daytime conditions.

## MINOR APPROACH OBSERVATIONS

This section details visibility on Bonanza Creek Rd and Shenandoah Tr. Both approaches to NM 14 displayed stop sign visibility issues caused by the roadside foliage coupled with the signage offset from the pavement edge.

### Bonanza Cr Rd / NM 45

On Bonanza Creek Rd, the eastbound approach to NM 14, a Stop Ahead sign is approximately 370 feet from the stop bar. This sign becomes visible to drivers about 160 feet in advance, which means the driver's first indication of the approaching intersection is 530 feet before the intersection based on signage.

The Stop sign becomes visible to drivers as they pull adjacent to the Stop Ahead sign 370 feet from the stop bar. This distance satisfies the AASTO Design Stopping Sight Distance Criteria minimum of 250 feet at 35 MPH and is adequate for travel speeds up to 45 MPH. It would not provide sufficient stopping sight distance for speeds beyond 45 MPH, and it is likely from the observed driver behavior that a significant portion of drivers speed by more than ten miles an hour over the posted speed limit. The Bonanza Creek Rd approach with signage locations and sight distances are provided in Figure 2. Also shown in Figure 2 are the stop sign's offset from the edge stripe of the outside eastbound travel lane (14FT) and the offset of the eastbound stop bar from the edge of the southbound travel lane (35FT).

Figure 2: Existing Bonanza Creek Rd Eastbound Approach Signage and Stripping Measurements

While 95<sup>th</sup> percentile speeds are not used as the design speed for locating signage and safety factors are included in the AASHTO Stopping Sight Distances, it is recommended that shoulder foliage be trimmed regularly to maintain and possibly improve this level of visibility. Additional mitigation measures for this approach are discussed later in this report. The westbound approach presented more visibility challenges.

### Shenandoah Tr / NM 44

The first signage visibility issue for drivers as they approach NM 14 on Shenandoah Tr is that there is no Stop Ahead sign. Google Street View imagery from December of 2023 shows a Stop Ahead sign mounted to a utility pole approximately 500 feet in advance of the stop bar. However, Lee Engineering's field review showed that the sign had been removed. The Google Street View image and a picture of the same view taken by Lee Engineering staff are shown for comparison in Figure 3 and Figure 4 respectively.

Figure 3: Shenandoah Tr Westbound Approach December 2023  
(Google Earth)

Figure 4: Shenandoah Tr Westbound Approach July 2024

A series of curves immediately precede the Shenandoah Tr westbound approach to NM 14. As drivers round the final curve before the intersection, the Stop Ahead sign pictured in the Google Street View image above would have been clearly visible. The approaching intersection would not be obvious without it, particularly at night. This sign should be replaced in the near term.

The westbound Stop sign first becomes visible to drivers as they pass the driveway seen in Figures 2 and 3, approximately 625 feet before the stop bar. However, the sign is quickly lost to sight behind foliage, other signage, and utility poles. It does not become clearly and consistently visible to the driver until approximately 450 feet from the stop bar. Again, this spacing is more conservative than the 250 feet provided by AASHTO Stopping Sight Distances based on the posted speed limit (35MPH). However, it does not provide an obvious indication that would be actionable for those exceeding the speed limit by more than 15 miles per hour. This indicates that the excessive speed issue is likely a major contributing factor to the stop sign compliance issue.

The distance from the stop bar at which the stop sign is visible to drivers, the stop sign's offset from the outside westbound travel lane strip (10FT), and the stop bar's offset from the northbound travel lane (40FT) is shown in Figure 5. Also shown in Figure 5 is the location of the missing stop ahead sign shown circled in yellow.

Figure 5: Existing Shenandoah Tr Westbound Approach Signage and Stripping Measurements

Stop control signage on the minor approaches is adequately spaced from the intersection and from their associated stop bars but does suffer from some occlusion primarily due to foliage and secondarily to other obstructions. Recommendations to mitigate these visibility issues will be discussed later in this report.

## NM 14 SPEED CONTROL DEVICES

On the NM 14 approaches to the intersection, a posted speed limit change from 55 to 45 MPH occurs in the southbound travel direction, and a change from 50 MPH to 45 MPH occurs in the northbound travel direction. This speed limit decrease is effective approximately 1,550 feet north of the intersection and about 1,450 feet south of the intersection. The speed limit changes are advertised in advance by W3-5 Reduced Speed Limit Ahead signs. Both the 45 MPH Speed Limit Sign and the Reduced Speed Limit Ahead signs are standard-size yet offset from the edge of the travel lane far enough that they are difficult to notice if they are not actively looking for them.

### NM 14 Southbound Approach

Pictures of the speed limit change ahead and the speed limit signs on NM 14 southbound are shown for reference in Figure 6 and Figure 7. The sign shown in Figure 8 is a speed-related guide sign.

Figure 6: NM 14 Southbound Reduce Speed Limit Ahead Sign

Figure 7: NM 14 Southbound Speed Limit Sign

Figure 8: NM 14 Southbound Speed Guide Sign

Despite these signs being a MUTCD-approved size, they do not stand out within the driver's field of view. The W3-5 Reduce Speed Ahead sign is offset from the edge of the lane stripe by 30 feet, and the Speed Limit Sign is offset from the outside lane stripe by 25 feet. These offsets lower the effective height of the signs due to their location at the bottom of a swell. It also positions the signs against a visually busy background, making them less obvious to drivers in reduced lighting. The NM 14 southbound existing signage's distances from the intersection and their respective offsets are shown in Figure 9 and Figure 10.

Figure 9: Existing NM 14 Southbound Approach Speed Sign Distance from Intersection

Figure 10: Existing NM 14 Southbound Approach Speed Sign Offsets

There is also a white text green background guide sign for both intersection approaches on NM 14 that reads: "Entering Residential Area Slower Speeds Ahead." On the southbound approach, it is located after the Speed Limit Sign and is offset from the lane's edge stripe by about 25 feet. The distance these signs are located from the intersection is adequate regarding distance for drivers to safely and comfortably make the required deceleration. The signage's offsets do present an issue regarding their prominence within a driver's field of view and their MUTCD compliance. Possible mitigation measures to improve the signage visibility are discussed later in this report.

## NM 14 Northbound Approach

For the northbound approach, the Entering Residential Area Slower Speeds Ahead guide sign is located in advance of the Reduced Speed Ahead Sign and is offset by approximately 15 feet. Photographs of the three speed-related signs as seen on the northbound approach of NM 14 to the intersection can be seen in Figure 11 through Figure 13.

Figure 11: NM 14 Northbound Reduce Speed Guide Sign

Figure 12: NM 14 Southbound Reduce Speed Limit Ahead Sign

Figure 13: NM 14 Northbound Speed Limit Sign

From the preceding figures, it can be noted that the signage is slightly more apparent to drivers traveling northbound than it is for southbound drivers. The lateral offsets from the white travel lane edge stripe are all approximately 15 feet. This spacing brings the sign closer into the driver's field of view than the spacing for the southbound signs.

The distance of each sign from the intersection can be seen in Figure 14, and the signage offsets can be seen in Figure 15. Once again, the spacing from the intersection of the signs is sufficient for the required deceleration. The lateral offsets do not meet MUTCD guidance.

The MUTCD recommended lateral offsets of Regulatory, Warning, and Guide signs rural highway guidelines are as follows:

- Regulatory Signs (Speed Limit Signs):
  - MUTCD Section 2A.16 (Standardization of Location): States that regulatory signs, including Speed Limit signs, should generally have a minimum lateral offset of 6 feet from the edge of the traveled way. In the absence of a curb, the sign should be placed no closer than 6 feet and no farther than 12 feet from the edge of the traveled way.

- Warning Signs:
  - MUTCD Section 2C.05 (Placement of Warning Signs): Warning signs should also be placed with a minimum lateral offset of 6 feet from the edge of the traveled way. Like regulatory signs, if there is no curb present, the sign should be located no closer than 6 feet and no farther than 12 feet from the traveled way.
- Guide Signs:
  - MUTCD Section 2D.25 (General Service Signs): For guide signs, the MUTCD suggests a minimum lateral offset of 12 feet from the edge of the traveled way to ensure clear visibility, particularly given their larger size and the need for early recognition by drivers.

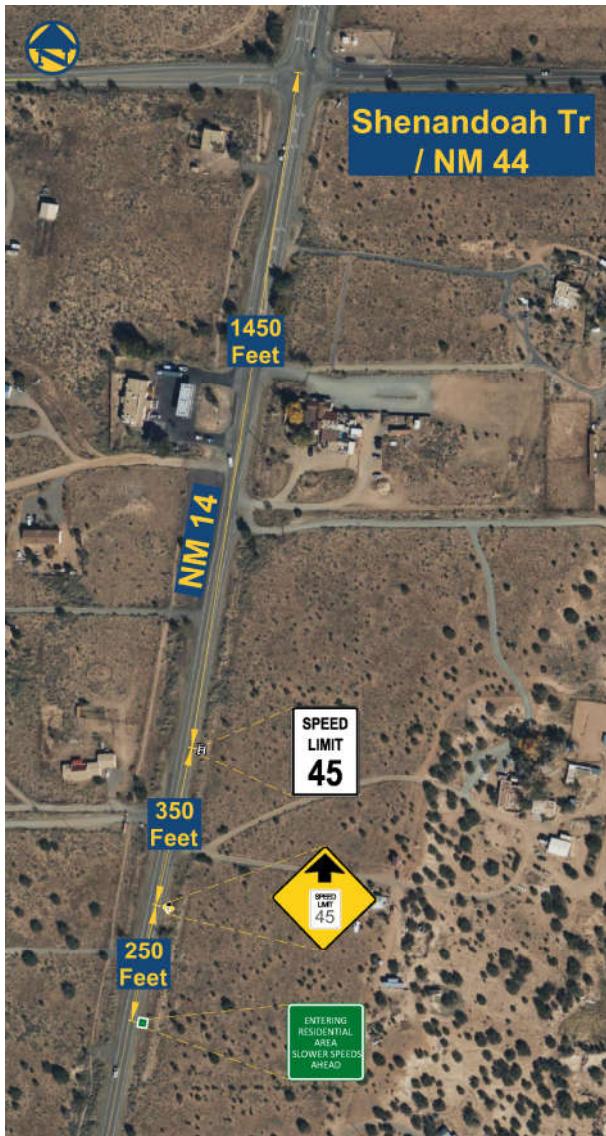

Figure 14: Existing NM 14 Northbound Approach Speed Sign Distance from Intersection

Figure 15: Existing NM 14 Northbound Approach Speed Sign Offsets

From Figure 15, the sign's lateral offsets are an improvement over the signage on the southbound approach. The improvement is apparent both in the distances as measured and in their noticeability, as seen in the images. However, the lateral spacing is still short of meeting MUTCD guidelines. Mitigation measures for these inadequacies are discussed later. The following details the Traffic data collected by Lee Engineering.

# TRAFFIC MEASUREMENTS AND RESULTANT DATA

Lee Engineering used a pneumatic tube vehicle count system and video detection equipment to collect traffic volume, classification, speed, and movement data. This data was used to understand the existing traffic conditions in the study area.

## TRAFFIC DATA COLLECTION

24 hours of multimodal count data were collected on April 4<sup>th</sup>, 2024, from two detection/count devices within the study area. A pneumatic tube couplet was deployed north of the intersection on NM 14 to provide motor vehicle volumes, speeds, and vehicle classification data for traffic on NM 14. A video data collection device was placed at the southwest corner of the intersection to collect pedestrian, bicyclist, and vehicle turning movement counts for the intersection.

Figure 16: Data Collection Type and Location

### Pneumatic Tube Data

The project team deployed a pneumatic tube counter to collect 24 hours of vehicle volume, speed, and vehicle classification data on NM 14 north of the intersection. Table 2 shows the 50<sup>th</sup>, 85<sup>th</sup>, 95<sup>th</sup> percentile speeds from Thursday April 4<sup>th</sup>. Table 2 shows the recorded 50<sup>th</sup>, 85<sup>th</sup>, 95<sup>th</sup> percentile speeds.

*Table 2: Pneumatic Tube Traffic Count and Speed Profile*

Speed Percentiles (MPH)					
Date	24 Hour Volume	50th	85th	95th	
4/4/2024	6738	52	59	63	

From Table 2, the 50<sup>th</sup> percentile speed is seven miles an hour above the posted speed limit. Additionally, the 85<sup>th</sup> percentile is fourteen miles an hour above the posted speed limit, and the 95<sup>th</sup> percentile is eighteen miles an hour more than the posted speed limit.

For this report, drivers exceeding 60 MPH are considered nuisance drivers. Of the 6,738 drivers on the road during the study period, 738 qualified as nuisances, amounting to 11% of drivers. Within the posted 45 MPH roadway segment, more than 10% of drivers exceed the posted speed limit on NM 14 by 15 MPH or more. This represents a high-risk probability of crashes within this area having more severe consequences than would be likely at safer speeds.

For example, the Stopping Sight Distance (SSD) for the post-speed limit of 45 MPH is 360 feet; at the 85th percentile speed of 52 MPH, it is 451 feet; and at the nuisance speed threshold of 60 MPH, it is 570 feet. Thus, the nuisance speeder has 210 fewer feet to react than a compliant driver and significantly higher momentum with which to cause injury. In addition to any other mitigation measures, periodic speed enforcement operations at this intersection are recommended.

Data from the pneumatic tube counters was also used to show the vehicle types traveling on NM 14 by their associated vehicle classifications. Table 2 Below summarizes the vehicle classification data.

*Table 3: Vehicle Classification Summary*

Vehicle Classifications	Vehicles Counted	Classification Percentage
Motorcycles	53	0.8%
Passenger Cars	3796	56.5%
Four Tire, Single Unit	1754	26.1%
Buses	50	0.7%
Two Axle, Six Tire, Single Unit	926	13.8%
Heavy Trucks	138	2.1%

Table 2 indicates a relatively normal distribution of vehicle types traveling along NM 14. This is consistent with expectations for a major collector within a rural, primarily residential area and with a through connection to an interstate.

## Vehicle Turning Movement Counts at the Bonanza Creek Rd and NM 14 Intersection

Turning Movement Counts (TMCs) were collected on April 4<sup>th</sup>, 2024, between 6:00 AM and 7:00 PM. These counts determined vehicular traffic's AM and PM Peak Hours and the vehicles' volumes, making each movement possible at the intersection. The traffic Peak Hours were from 7:15 to 8:15 AM and 4:45 to 5:45 PM. Figure 17 displays the AM and PM Peak Hour TMC volumes.

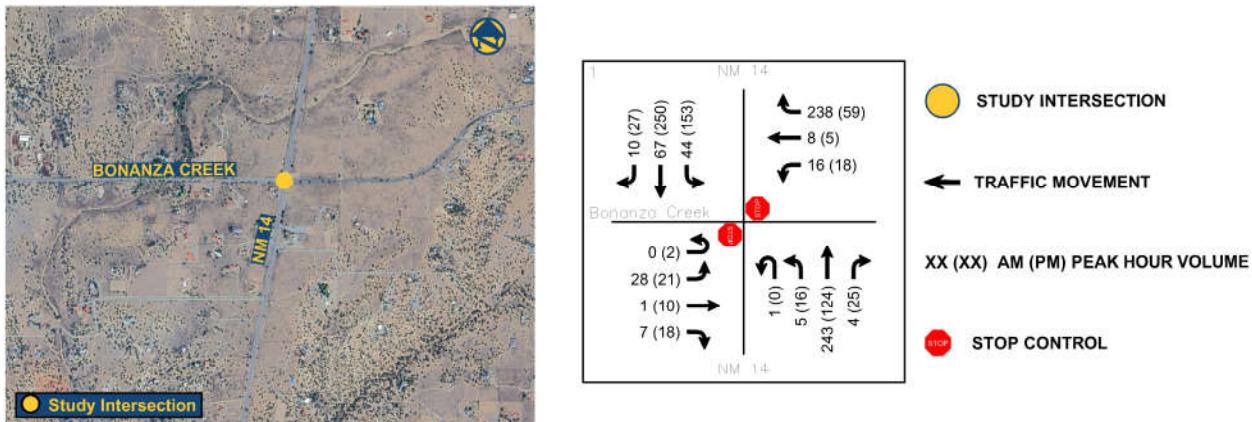

Figure 17: Study Intersection TMCs

From the TMC, the two highest volume AM movements are the northbound through and the westbound right turns. These movements conflict because those making the westbound right turn are trying to find gaps in the northbound flow to complete their turn. However, neither movement is approaching capacity.

During the PM peak hour, the heaviest traffic flow is in the southbound through direction. The northbound through movement and the southbound left turn are nearly equal and are the second and third most voluminous movements. Again, two of the highest volume movements, northbound and southbound left, are conflicting, raising the question of whether or not the existing two-way stop control is the preferred stop-control method.

To quantify the best-fit stop control method at the intersection, Lee Engineering used these TMC volumes in conjunction with the Crash Data to conduct Two- and Four-way Stop Control Warrants and a Signal Control Warrant. The crash data is presented in the next section, followed by the control-type warrants.

# CRASH DATA ANALYSIS AND CRASH REPORT REVIEW

## 5-YEAR CRASH DATA ANALYSIS

This study analyzed five years of crashes occurring in the study area between 2018 and 2022 retrieved from the New Mexico Statewide Traffic Records System. The most recent crash dataset, which contained 10 crashes, was the most recent available at the time of this study. Crash data is extracted from crash reports filed with law enforcement agencies and rated on a severity scale, which separates accidents as follows.

### Severity

The KABCO scale classifies the severity of crashes in New Mexico. The letters in KABCO represent the severity of a crash:

- K – Killed (Fatal)
- A – Incapacitated (Serious Injury)
- B – Minor Injury
- C – Complaint of Injury (Suspected Injury)
- O – No Apparent Injury (Property Damage Only)

Five years of crash data were reviewed for this study. During that time, there were a total of 10 crashes: two minor or visible Injuries (B), one Complaint of Injury (C), and seven Property Damage Only (O). The crash reports also report contributing factors, including the time of day, the weather conditions, the involvement of drugs and alcohol, and the involvement of pedestrians and bicyclists, among others. A summary of this information pertaining to the reported crashes is provided in Table 4.

Table 4: Crash Summary

Crash Summary		NM 14 & Bonanza
	Total Crashes	10
CONTRIBUTING FACTORS	2018	2
	2019	1
	2020	3
	2021	1
	2022	3
	Avoid No Contact Vehicle	2
SEVERITY	Disregarded Traffic Signal	1
	Driver Inattention	4
	Excessive Speed	1
	Failed To Yield Right Of Way	2
	Following Too Closely	1
	None	8
	Other Improper Driving	1
	Other, No Driver Error	3
	Passed Stop Sign	2
	Speed Too Fast For Conditions	1
LIGHTING CONDITION	Under The Influence Of Alcohol	1
	Vehicle Skidded Before Braking	1
	%Driver Inattention	14%
BIKE/ PED	%Failure To Yield Right Of Way	7%
	%Disregarded Traffic Signal	4%
	%Excessive Speed	4%
	Fatal Injury (Killed) (K)	0
	Suspected Serious Injury (A)	0
CRASH TYPE	Visible Injury (B)	2
	Complaint of Injury (C)	1
	Property Damage Only (O)	7
	%Property Damage Only (O)	70%
LIGHTING CONDITION	%Complaint of Injury (C)	10%
	%Visible Injury (B)	20%
	Daylight	7
SEVERITY	Dark-Lighted	1
	Dark-Not Lighted	1
	%Daylight	78%
BIKE/ PED	%Dark-Lighted	11%
	%Dark-Not Lighted	11%
	Pedestrian Involved	0
CONTRIBUTING FACTORS	Bicyclist Involved	0
	%Pedestrian Involved	0%
	%Bicyclist Involved	0%
LIGHTING CONDITION	Left Blank	7
	Other Vehicle - From Same Direction/Both Going Straight	2
	Other Vehicle - One Stopped/Entering At Angle	2
	Other Vehicle - Both Turn Right/Entering At Angle	2
	Other Vehicle - All Others/Entering At Angle	2
	%Other Vehicle - From Same Direction/Both Going Straight	13%
SEVERITY	%Other Vehicle - One Stopped/Entering At Angle	13%
	%Other Vehicle - Both Turn Right/Entering At Angle	13%

The first takeaway from the crash data is that no fatal accidents have occurred within the study area within the last five years. Additionally, none of the ten recorded crashes involved pedestrians or bicyclists, nor did they involve drugs, though one crash involved alcohol. The most common crash types were: Other Vehicle – From Both Direction/ Both Going Straight, Other Vehicle - One Stopped/ Entering at Angle, and Other Vehicle - Both Turn Right/ Entering at Angle. 78% of reported crashes occurred during Daylight hours, and 22% occurred under Dark-Lighted or Dark-Not Lighted conditions. Three injury crashes were reported, and 7 crashes were classified as Property Damage Only. Driver Inattention and Failure to Yield Right of Way were the most common contributing factors.

## CRASH REPORT REVIEW

In addition to a review of the aggregated crash data from the 5-year period between 2018 and 2022, Lee Engineering reviewed each of the individual crash reports for the ten crashes that occurred during that same 5-year period. The following is a brief description of each accident discussed in chronological order and identified by crash report number.

- **Crash 23474022, June 8<sup>th</sup>, 2018, 5:54 PM**
  - A vehicle traveling southbound on NM 14 attempted a turn right onto Bonanza Creek Rd while traveling too fast for the maneuver. It crashed into a vehicle parked in the eastbound left-turn lane of Bonanza Creek Rd. There were no injuries.
    - Neither lighting nor stop-control compliance was involved, but excessive speed was a factor for which a citation was issued.
- **Crash 23474768, December 2<sup>nd</sup>, 2018, 3:23 PM**
  - Conflicting statements blur the exact details; however, it was determined by the officer at the scene that a vehicle traveling at an excessive speed eastbound on Bonanza Creek Rd failed to stop at the stop sign and entered the intersection without slowing, causing a T-Bone accident. The driver struck also stated they were traveling 55 MPH southbound on NM 14, which is 10 MPH over the posted speed limit at that location on NM 14.
    - Lighting was not a factor. Stop sign compliance and excessive speed were both factors.
- **Crash 23474513, October 31<sup>st</sup>, 2019, 10:00 AM**
  - A northbound driver was rear-ended by another northbound driver while attempting to legally turn left into a driveway on the southbound side of the road. This collision occurred near but not at the NM 14 and Bonanza Creek Rd intersection.
    - Driver inattention was the only listed contributing factor.
- **Crash 23462341, January 16<sup>th</sup>, 2020, 10:50 AM**
  - The crash was due to icy road conditions. A vehicle traveling westbound on Shenandoah Tr lost control of the vehicle and slid into the intersection. Excessive speed was determined not to have been a factor.
    - Icy conditions were the only contributing factor.
- **Crash 30272736, October 20<sup>th</sup>, 2020, 11:39 AM**
  - Two vehicles traveling westbound on Shenandoah Tr stopped at the intersection. The first vehicle started to proceed into the intersection, making a right turn, but came to a second stop with the front bumper at the edge of the northbound travel lane. It was after making the second stop that the vehicle behind failed to notice the first vehicle's second stop and collided with it.
    - Lighting, speed, and stop compliance were not factors. However, the sightlines provided from the westbound stop bar position to see northbound traffic may have contributed.

- **Crash 30272882, December 17<sup>th</sup>, 2020, 6:16 PM**
  - Westbound driver on Shenandoah Tr stated their foot slipped off the brake and onto the accelerator pedal on the stop sign approach. The vehicle entered the intersection at a speed close to 35 MPH and collided with another vehicle traveling northbound on NM 14.
    - Failure to obey stop/yield sign citation was issued. Dark, no lighting conditions were noted. Speed was not determined to be a contributing factor.
- **Crash 30273208, May 31<sup>st</sup>, 2021, 1:27 PM**
  - A westbound driver stopped on Bonanza Creek Rd saw another vehicle approaching the intersection on NM 14 but misjudged the available gap and proceeded into the intersection, causing a collision.
    - Driver inattention was the only listed contributing factor.
- **Crash 30273707, January 21<sup>st</sup>, 2022. 5:20 PM**
  - Hit and run accident. Collision was apparently committed willfully by an intoxicated individual who fled the scene.
    - Lighting, excessive speed, and stop compliance were not causal factors.
- **Crash 30319906, April 20<sup>th</sup>, 2022, 7:00PM**
  - Driver failed to comply with stop control eastbound on Bonanza Creek Rd and was struck by a southbound vehicle on NM 14 traveling at 45 MPH.
    - Stop compliance was the only listed causal factor
- **Crash 30319982, May 24<sup>th</sup>, 2022, 6:26 AM**
  - Driver traveling westbound on Shenandoah Tr traversed the intersection and crashed into trees on the northwest corner of the intersection. The driver fled the scene and was not present when the officer arrived. The officer stated "The vehicle appeared to have attempted to make a right hand turn from westbound Shenandoah Trail onto northbound NM 14. The vehicle appeared to have failed to stop at the stop sign and was traveling at a speed too fast to negotiate the turn."
    - Both speed and stop compliance were determined to be causal factors. Lighting was not.

In summary, ten reported collisions occurred over the five-year period. Four involved failures to comply with the stop sign, three involved excessive speed, one occurred in Dark Not Lit conditions, and one suggested sightline visibility issues.

## **STOP CONTROL TYPE WARRANTS**

Lee Engineering conducted Two- and Four-way Stop Control Warrants based on the guidance and recommendations of the MUTCD 11<sup>th</sup> Edition. A Signal Control Warrant was also conducted for the intersection of NM 14 and Bonanza Creek Rd/Shenandoah Tr using HCS 2023 software based on the methods and procedures detailed in the Highway Capacity Manual. These Warrants were conducted using the traffic volume and movement data collected by Lee Engineering on April 4th, 2024, and the 5-Year Crash Data provided by the NMDOT.

## **TWO-WAY STOP CONTROL**

The 2B Sections of the 2023 11th Edition of the MUTCD were used to determine the necessity of stop control at the intersection. Section 2B.09 provides circumstances where no control devices are necessary. One of these circumstances is that all approaches are single-lane, and another is that none of the approaches is for a through highway. Based solely on MUTCD 2B.09, the study intersection requires, at a minimum, two-way stop control for the minor approaches.

Based on MUTCD Section 2B.07 the guidance criteria for selecting the minor road were adhered to with the selection of Bonanza Creek Rd and Shenandoah Tr as the minor approaches. These criteria are as follows as transcribed from the source text:

- A. A roadway intersecting a designated through or numbered highway,
- B. A roadway with the lower functional classification,
- C. A roadway with the lower traffic volume,
- D. A roadway with the lower speed limit, and/or
- E. A roadway that intersects with a roadway that has a higher priority for one or more modes of travel.

To reiterate, two-way stop control is required for the minor approaches to NM 14 at the study intersection.

## **FOUR-WAY STOP CONTROL WARRANT**

To determine the necessity of a four-way, also known as all-way stop control, condition, the MUTCD was used as the guiding document. To determine the appropriateness of four-way stop implementation, the MUTCD provides five warrants A-E upon which to base the decision. It should be noted that the warrants are not intended to supersede engineering judgment but rather to serve as a tool to inform said judgment. The five all-way stop control warrants are as follows:

- A. All-Way Stop Control Warrant A: Crash Experience (see Section 2B.13)
- B. All-Way Stop Control Warrant B: Sight Distance (see Section 2B.14)
- C. All-Way Stop Control Warrant C: Transition to Signal Control or Transition to Yield Control at a Circular Intersection (see Section 2B.15)
- D. All-Way Stop Control Warrant D: 8-Hour Volume (Vehicles, Pedestrians, Bicycles) (see Section 2B.16)
- E. All-Way Stop Control Warrant E: Other Factors (see Section 2B.17)

### All-Way Stop Control Warrant A: Crash Experience

This warrant is based on the presence and frequency of crashes at the intersection. This warrant states that:

*For a four-leg intersection, there are five or more reported crashes in a 12-month period or six or more reported crashes in a 36-month period that were of a type susceptible to correction by the installation of all-way stop control*

Based on the Crash Data Analysis presented previously, warrant A's criteria have not been met.

### All-Way Stop Control Warrant B: Sight Distance

Warrant B is based on sight distance and details the criteria for determination as follows:

*All-way stop control may be installed at an intersection where an engineering study indicates that sight distance on the minor-road approaches controlled by a STOP sign is not adequate for a vehicle to turn onto or cross the major (uncontrolled) road*

*At such a location, a road user, after stopping, cannot see conflicting traffic and is not able to negotiate the intersection unless conflicting cross traffic is also required to stop.*

While Lee Engineering noted some visibility/line-of-sight issues on the minor approaches based on the stop bar set back from the NM 14 travel lanes, this issue is better addressed directly rather than be used as justification to implement all-way stop control. Warrant B was not met.

### All-Way Stop Control Warrant C: Transition to Signal Control or Transition to Yield Control at a Circular Intersection

This warranty is a provision allowing for the interim installation of all-way stop control before the planned implementation of intersection signalization. Lee Engineering conducted a Signal Control Warrant Analysis that did not result in the recommendation to signalize the intersection, nor are there any known plans to construct a signal at this intersection in the near to mid-term. Therefore, warrant C was not satisfied.

### All-Way Stop Control Warrant D: 8-Hour Volume (Vehicles, Pedestrians, Bicycles)

All-way stop control warrant D is based on the following criteria:

*All-way stop control may be installed at an intersection where an engineering study indicates:*

*A. The combined motor vehicle, bicycle, and pedestrian volume entering the intersection from the majorstreet approaches is at least 300 units per hour for each of any 8 hours of a typical day; and*

*B. The combined motor vehicle, bicycle, and pedestrian volume entering the intersection from the minorstreet approaches is at least 200 units per hour for each of any of the same 8 hours.*

For this warrant, the A and B criteria must both hold true for the warrant to be satisfied. For reference, the north and southbound approaches are the major approaches, and the east and westbound approaches are considered the minor approaches. From the TMC data, the following table was compiled to assess Warrant D criteria.

*Table 5: Intersection Approach Volumes*

Traffic Volumes By Approach				
Hour	NB	SB	EB	WB
6:00	113	23	10	82
7:00	246	103	32	249
8:00	223	136	41	183
9:00	231	157	25	86
10:00	185	154	37	83
11:00	145	159	44	54
12:00	168	194	34	81
13:00	157	212	35	71
14:00	149	220	34	68
15:00	163	305	44	80
16:00	181	384	57	74
17:00	147	426	44	75
18:00	84	294	40	61

As can be seen from Table 5 during no hour of the day does the NM 14 major roadway have 300 or more vehicles, while simultaneously, any minor approaches show volumes of 200 or more vehicles. Please note no pedestrians or cyclists were recorded moving through the intersection on the day TMC data was collected. Therefore, the criteria for Warrant D are not met.

### All-Way Stop Control Warrant E: Other Factors

The criteria listed for Warrant E are as follows:

- A. The need to control left-turn conflicts,*
- B. An intersection of two residential neighborhood collector (through) streets of similar design and operating characteristics where all-way stop control would improve traffic operational characteristics of the intersection, or*
- C. Where pedestrian and/or bicyclist movements support the installation of all-way stop control.*

None of these criteria are relevant to the study intersection. Regarding criteria A, left-turn volumes compared to the conflicting through-movement volumes do not suggest a deficiency in the probable availability of appropriate gaps. Addressing criteria B, NM 44 and NM 45, Shenandoah Tr and Bonanza Creek Rd are not neighborhood collector streets. Additionally, there were no recorded pedestrian or cyclist volumes to support the installation of all-way stop control. Therefore, Warrant E was not met.

Based on the above evaluation of the five all-way stop control warrants, the study intersection does not warrant a change from two-way to four-way stop control.

## SIGNAL CONTROL WARRANT

HCS software was used to conduct a Signal Control Warrant based on the 13-hour counts collected from the study intersection. Per the MUTCD there are nine warrants to assess for determining whether or not an intersection is recommended to be signalized. Those warrants are as follows:

- Warrant 1, Eight-Hour Vehicular Volume.
- Warrant 2, Four-Hour Vehicular Volume.
- Warrant 3, Peak Hour.
- Warrant 4, Pedestrian Volume.
- Warrant 5, School Crossing.
- Warrant 6, Coordinated Signal System.
- Warrant 7, Crash Experience.
- Warrant 8, Roadway Network
- Warrant 9, Intersection Near a Grade Crossing

Please note that Warrants 5, 6, and 10 were not applicable at the study intersection because the intersection is not near a school crossing. It is not part of a coordinated signalized corridor, nor is it near a grade crossing. The study intersection displayed relatively low traffic volumes and a lack of pedestrian or bicyclist activity. Because of the low traffic volumes throughout the day, Warrants 1 through 3 were not met. Similarly, Warrant 4 was not met due to insufficient pedestrian and bicycle volumes. Further, Warrant 8 was not met based on any of the roadways being classified as a principal roadway network for through traffic flow, nor are traffic volumes projected to carry 1,000 vehicles during peak hour or 1,000 vehicles for any five non-peak hours within the next five years based on the growth rates provided by the MRCOG Regional Cube/2 Model. In summary, none of the nine signal control warrants were met. The HCS Signal Warrant result report is provided as addenda to this report.

In conclusion, the existing two-way stop control configuration is the most appropriate control type for the study intersection.

# SAFETY MITIGATION STRATEGIES

This study was initiated in response to community concerns about the safety of the NM 14 intersection with Bonanza Creek Rd (NM 45) / Shenandoah Tr (NM 44). Those concerns were centered around two major issues: excessively fast travel speeds on all approaches and driver compliance with the minor approach stop signs. During the course of the study, both issues were verified, and other minor issues and contributing factors were identified during the field visit, traffic data collection, and crash history review portions of this study. The following is a discussion of possible mitigation measures to address these safety concerns for the community.

The mitigation measures considered focus mostly on near- and mid-term implementable strategies. These include improvements that can be accomplished with updates to roadway marking and striping, the positioning and sizing of regulatory, warning, and guidance signage, and the installation of shielded intersection lighting. All mitigation recommendations are offered after having been carefully considered for regulatory compliance, relevance, effectiveness, and to maintain the quite rural character of the surrounding area.

## ROADWAY MARKING, STRIPPING, AND SIGNAGE – MINOR APPROACHES

One of the most dangerous driver behaviors reported by community members and substantiated by the intersection's crash history is a regular failure to comply with the stop signs. Excessive driving speeds and visibility issues are likely the largest contributing factors to this compliance problem. To address the stop sign compliance issue, the mitigation recommendations herein also address these other contributing factors. The mitigation recommendations for the minor intersection approaches are as follows.

### Bonanza Creek Rd (NM 45)

As described in the Field Visit section of this report, there are some visibility issues on this approach related to the warning and regulatory signage's lateral offset from the edge of the travel lane and the presence of foliage. To remedy these issues, it is recommended that all regulatory and warning signs, i.e., the stop and stop ahead signs, be relocated to meet the recommendations provided by the 2023 11<sup>th</sup> Edition of the MUTCD.

Those recommendations are that in the absence of a curb, the signs should be placed no closer than 6 feet and no farther than 12 feet from the edge of the traveled way. Specifically, an effort should be made to locate the signs with an offset closer to 6 feet than 12. The existing sizes of these signs are adequate. To supplement the stop ahead warning sign, a STOP AHEAD thermoplastic pavement marking located adjacent to the stop ahead sign is recommended. To maintain the visibility of the signage, it is important that the shoulder foliage be regularly trimmed and cut back

In addition to the STOP AHEAD pavement marking, it is recommended that the roadway striping be replaced with 6-inch-wide thermoplastic striping, including both white outer edge marking and yellow center lane/median stripping. The existing stop bar should also be removed and relocated. The replacement stop line should be 2 feet wide, thermoplastic, and located offset back from the NM 14 outside lane edge by 10 feet per MUTCD guidance. With the stop bar relocation, the corner-turning radii should be reduced. These recommendations are shown in Figure 18, and the stop sign and stop line locations are shown in greater detail in Figure 20.

Figure 18: Proposed Bonanza Creek Rd Approach Mitigations

### Shenandoah Tr (NM 44)

Recommendations for the eastbound Shenandoah Tr approach are very similar to those for the Bonanza Creek Rd approach. First, the stop ahead warning sign that was noticed to be absent from the westbound approach should be replaced and mounted on its own pole rather than to the utility pole as it previously was, as close as feasible to a 6-foot lateral offset from the edge of the roadway stripe. In addition, it is recommended that a thermoplastic STOP AHEAD pavement marking be installed adjacent to the stop ahead warning sign.

To improve the visibility of the stop sign itself, it is recommended that the stop sign be relocated, as shown in Figure 19. In addition to relocating the stop sign, it is also recommended that the stop bar be relocated to an offset back from the edge of the NM 14 outside lane of 10 feet and be 2 feet wide thermoplastic. To accommodate this relocation, it is also recommended that the corner-turning radii be reduced. The stop sign and stop line mitigations are shown in greater detail in Figure 20. Further, it is recommended that the approach be restriped with 6-inch-wide thermoplastic stripping, including white outer edge markings and yellow center lane/median stripping.

Figure 19: Proposed Shenandoah Tr Approach Mitigations

Figure 20: Proposed Stop Sign and Stop Line Relocation Detail

## NM 14 - SIGNAGE POSITIONING AND SIZING

The primary community concern expressed about the NM 14 approaches to the study intersection was excessive travel speeds. As previously noted, the NM 14 roadway segment changes the posted speed limit from 55 MPH in the southbound travel direction and from 50 MPH in the northbound to 45 MPH. The traffic speed data collected shows that compliance with this residential area speed limit change is approximately 10%.

During the field visit, it was noted that some of the lateral offsets of the signage related to this required deceleration were larger than recommended. Specifically, on the southbound approach, the signage offsets are between 25 and 30 feet. It is recommended that all offset distances for regulatory and warning signs be shortened to 12 feet or less. To further improve their prominence, it is recommended that they be replaced with larger versions. The NM 14 approach recommendations are shown in Figure 21 for the southbound approach and Figure 22 for the northbound approach.

Figure 21: Proposed NM 14 Southbound Approach Mitigations

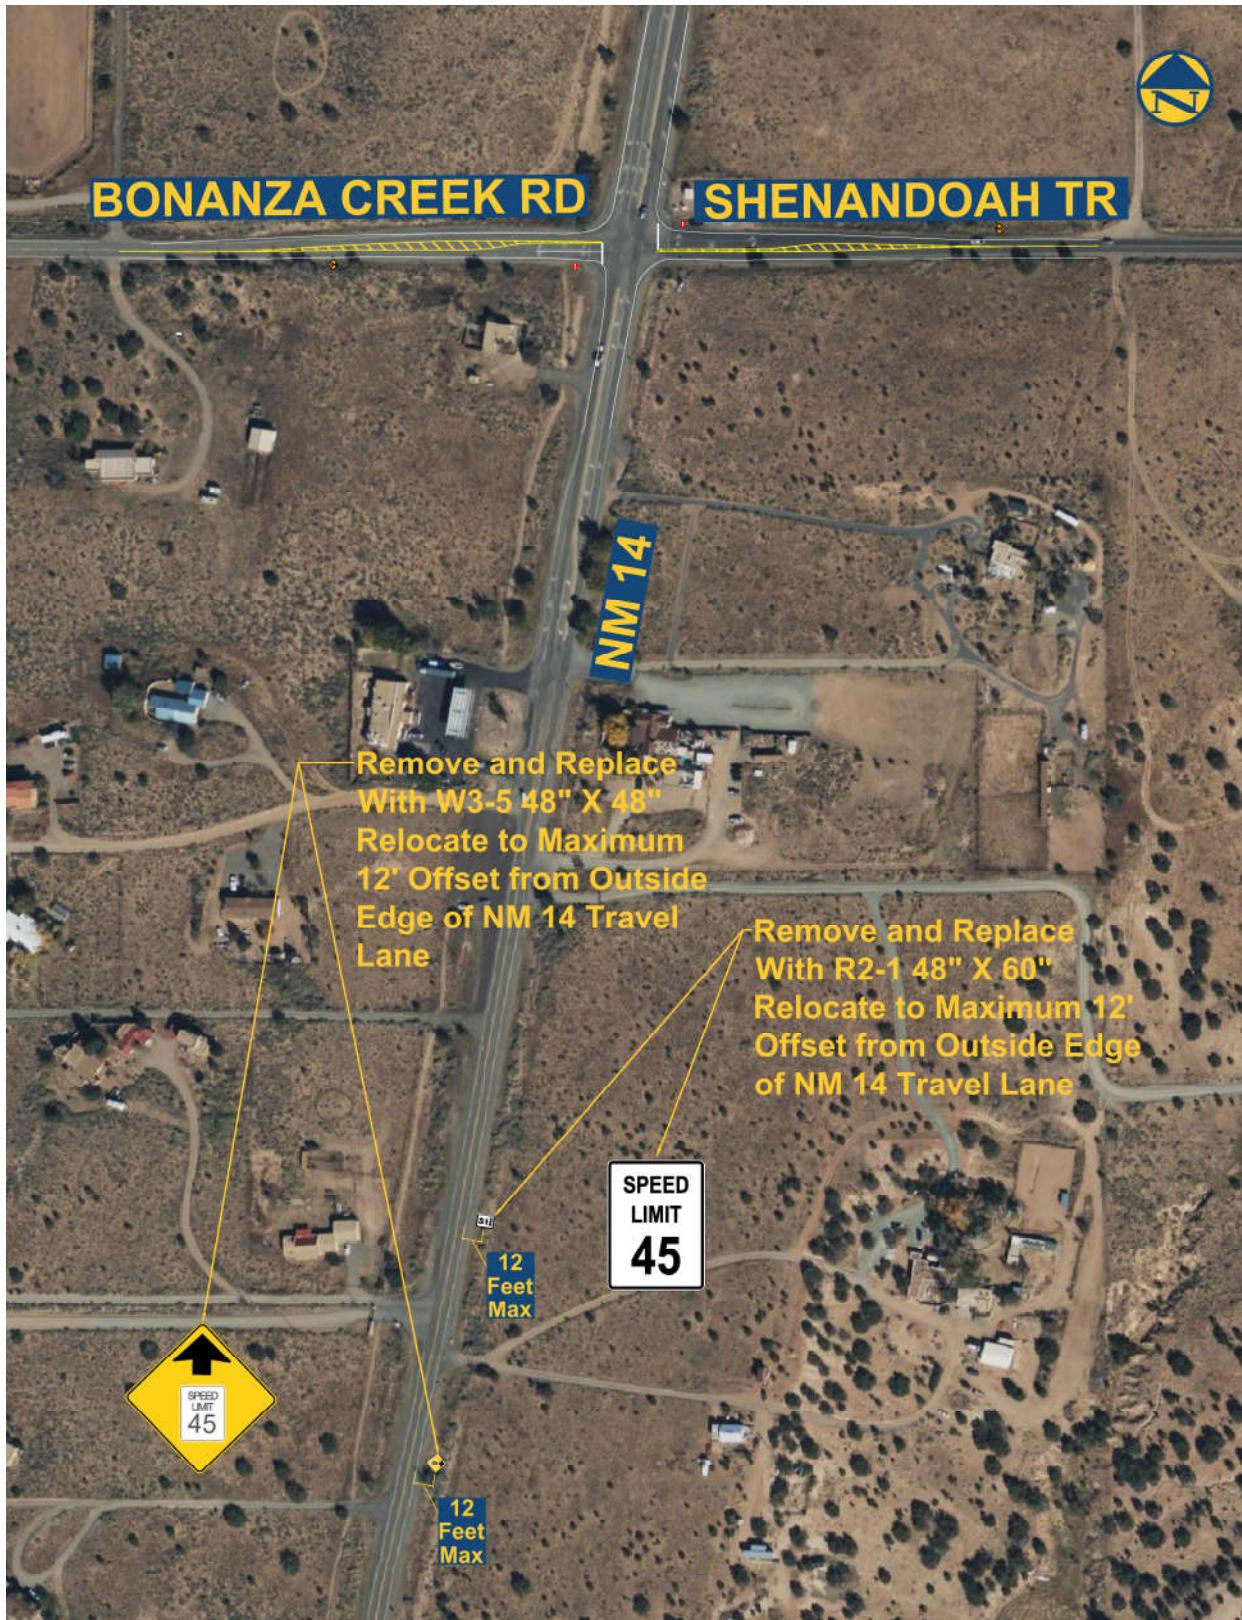

Figure 22: Proposed NM 14 Northbound Approach Mitigations

## INTERSECTION LIGHTING

Currently, the study intersection is unlit. Standard lighting options considered in an urban setting would not comply with the context of the area's zoning and would not likely be accepted by the community. However, an unlit, unsignalized intersection does present a safety concern, and Lee Engineering recommends that shielded lighting be considered for long-term implementation at the study intersection.

The previous portions of this mitigation section have recommended near-to-mid-term implementable mitigation strategies. The lighting issue is a longer-term goal requiring coordination with the NMDOT. While lighting is a safety concern, it is not the most pressing safety issue present at the study intersection. Of the ten crashes at the study intersection, only one occurred under dark, unlit conditions. The following is a summary of the mitigation recommendations resulting from this study.

## SUMMARY OF RECOMMENDATIONS

Near to mid-term safety mitigation strategies are as follows are listed below, separated into implementable and maintenance recommendations:

### Maintenance Recommendations:

- Foliage along shoulders should be regularly cut back and trimmed to maintain the visibility of regulatory and warning signage.
- Periodic speed enforcement operations may be warranted to help raise speed limit compliance on the approaches to the study intersection.

### Implementable Recommendations

- The intersection is best served by Two-Way Stop Control.
- The stop signs facing the east and westbound approaches should be relocated to provide a 6-foot lateral offset from the outer edge of the travel lane.
- The Stop Line should be replaced with a 2-foot-wide thermoplastic line and relocated to provide a 10-foot lateral offset from the outer edge of the NM 14 through travel lane.
- The outer edge white and yellow centerline/median lane stripping on the intersection approaches should be replaced with 6-inch-wide thermoplastic stripping, and the yellow-striped median should be diagonally striped to raise its visible profile.
- The regulatory (Speed Limit) and warning (Stop Ahead) sign lateral offset from the outer lane edge striping should be no greater than 12 feet.
- Regulatory (Speed Limit) and warning (Stop Ahead) signs on NM 14 should be replaced with larger versions.

In the long term it is recommended the County of Santa Fe coordinate with the NMDOT to provide shielded intersection lighting that meets the safety needs of the intersection while maintaining the rural character of the area and that does not intrude onto neighboring properties.

The planning level estimate for implementable recommendations is shown below.

*Table 6: Observed Challenges and Recommended Safety Countermeasures Summary*

Observed Challenge	Countermeasure	Included Items	Opinion of Probable Cost	Opinion of Total Probable Cost	Priority
Stop Sign and Speed Limit Compliance	Replace Stop Line and Lane Striping with Wider Thermoplastic Markings	6-Inch Thermoplastic Lane Striping 24-Inch Thermoplastic Stop Lines STOP AHEAD Thermoplastic Pavement Markings	\$9,500.00 \$1,225.00 \$1,800.00	\$24,175.00	1
	Replace and relocate Regulatory and Warning	New Larger Regulatory and Warning Signage Steel Post and Base for New Signage	\$4,400.00 \$7,250.00		
No Intersection Lighting	Coordinate with NMDOT to Install Appropriate Lighting Solution	2 Lighting Poles with shielded LED Luminaires	\$20,000.00	\$27,400.00	2

From Table 6, the cost of mitigation measures to address Stop Signs and Speed Limit compliance is estimated at \$24,175.00, and the installation of intersection lights for two lighting installations is approximately \$27,400. The total estimated cost for both countermeasures is \$51,575.00.

## ADDITIONAL SAFETY MITIGATION MEASURE OPTIONS

In addition to the safety mitigation measures recommended above, there are more robust mitigation options that address the stop sign compliance issue. These additional mitigation measures are Flashing Solar LED Traffic Signs and Transverse Rumble Strips (TRS).

Flashing warning or regulatory signs can be substituted for the existing Stop Ahead (W3-1) warning sign or for the Stop Sign (R1-1) on the east and westbound approaches to the study intersection to increase their visual prominence beyond the effect of the recommended relocation. If flashing warning signs are to be implemented, they should be located 6-12' from the outer edge of the travel lane per the MUTCD. Flashing solar versions of the standard regulatory and warning signs are commonly available. Please be advised that these flashing signs are accompanied by an increased environmental impact in the form of light pollution.

Transverse Rumble Strips, if implemented, should be located and constructed per NMDOT Standard Drawing 631-07-1/1. If TRSs are to be implemented, please be advised that they are also accompanied by an increased environmental impact in the form of noise pollution.

Detailed Planning Level Estimate

August 22, 2024

Detailed Planning Level Cost Estimate for NM 14 and NM 44/45 Safety Mitigations

Lee Engineering

TRAFFIC SIGNAL QUANTITIES					
ITEM NO.	ITEM DESCRIPTION	UNITS	QUANTITY	UNIT COST	TOTAL
701000	PANEL SIGNS	S.F.	88	\$50.00	\$4,400.00
701100	STEEL POST AND BASE POST FOR ALUMINUM PANEL SIGNS	L.F.	145	\$50.00	\$7,250.00
704701	HOT THERMOPLASTIC PAVEMENT MARKINGS 6"	L.F.	9500	\$1.00	\$9,500.00
704704	HOT THERMOPLASTIC PAVEMENT MARKING 24"	L.F.	70	\$17.50	\$1,225.00
704720	HOT THERMOPLASTIC PAVEMENT MARKING WORD (STOP AHEAD)	E.A.	2	\$900.00	\$1,800.00
502030	DRILLED SHAFT FOUNDATION 30" DIAMETER	L.F.	20	\$500.00	\$10,000.00
716701	LED ROADWAY LUMINAIRE	E.A.	2	\$1,700.00	\$3,400.00
707530	TYPE V STANDARD, 30'	E.A.	2	\$7,000.00	\$14,000.00
				TOTAL	\$51,575.00

# HCS Warrants Report

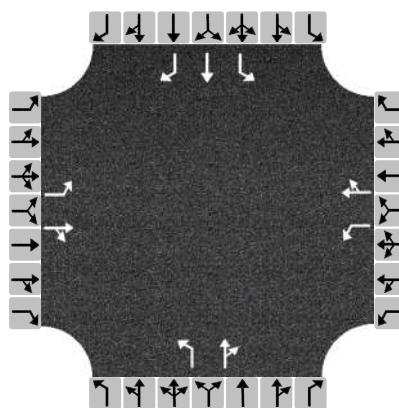

## Project Information

Analyst	LW	Date	5/28/2024
Agency	Lee Engineering	Analysis Year	2024
Jurisdiction	NMDOT	Time Period Analyzed	6 AM to 6 PM
Project Description			

## General

Major Street Direction	North-South	Population < 10,000	No
Starting Time Interval	6	Coordinated Signal System	No
Median Type	Undivided	Crashes (crashes/year)	2
Major Street Speed (mi/h)	45	Adequate Trials of Crash Exp. Alt.	No
Nearest Signal (ft)	0		

## Geometry and Traffic

Approach	Eastbound			Westbound			Northbound			Southbound		
Movement	L	T	R	L	T	R	L	T	R	L	T	R
Number of Lanes, N	1	1	0	1	1	0	1	1	0	1	1	1
Lane Usage	L	TR		L	TR		L	TR		L	T	R
Vehicle Volumes Averages (veh/h)	19	4	12	11	5	82	11	152	11	61	125	18
Pedestrian Averages (peds/h)		0			0			0			0	
Gap Averages (gaps/h)		0			0			0			0	
Delay (s/veh)		13.7			11.0			0.5			2.2	
Delay (veh-hrs)		0.1			0.3			0.0			0.1	

## School Crossing and Roadway Network

Number of Students in Highest Hour	0	Two or More Major Routes	No
Number of Adequate Gaps in Period	0	Weekend Counts	No
Number of Minutes in Period	0	5-year Growth Factor (%)	0

## Railroad Crossing

Grade Crossing Approach	None	Rail Traffic (trains/day)	4
Highest Volume Hour with Trains	Unknown	High Occupancy Buses (%)	0
Distance to Stop Line (ft)	-	Tractor-Trailer Trucks (%)	10

## Volume Summary

Hour	Major Volume	Minor Volume	Total Volume	Peds/h	Gaps/h	1A (70%)	1A (56%)	1B (70%)	1B (56%)	2 (70%)	3A (70%)	3B (56%)	4A (70%)	4B (56%)
07 - 08	136	82	228	0	0	No	No	No	No	No	No	No	No	No
08 - 09	348	249	629	0	0	No	Yes	No	No	No	No	No	No	No
09 - 10	358	183	582	0	0	No	Yes	No	No	No	No	No	No	No
10 - 11	388	86	499	0	0	No	No	No	No	No	No	No	No	No
11 - 12	337	83	457	0	0	No	No	No	No	No	No	No	No	No
12 - 13	304	54	402	0	0	No	No	No	No	No	No	No	No	No
13 - 14	362	80	476	0	0	No	No	No	No	No	No	No	No	No
14 - 15	369	71	475	0	0	No	No	No	No	No	No	No	No	No
15 - 16	369	68	471	0	0	No	No	No	No	No	No	No	No	No
16 - 17	468	80	592	0	0	No	No	No	No	No	No	No	No	No
17 - 18	565	74	696	0	0	No	No	No	Yes	No	No	No	No	No
18 - 19	573	75	690	0	0	No	No	No	Yes	No	No	No	No	No
Total	4577	1185	6197	0	0	0	2	0	2	0	0	0	0	0

## Warrants

### **Warrant 1: Eight-Hour Vehicular Volume**

- A. Minimum Vehicular Volumes (Both major approaches --and-- higher minor approach) --or--
- B. Interruption of Continuous Traffic (Both major approaches --and-- higher minor approach) --or--
- 56% Vehicular --and-- Interruption Volumes (Both major approaches --and-- higher minor approach)

### **Warrant 2: Four-Hour Vehicular Volume**

- Four-Hour Vehicular Volume (Both major approaches --and-- higher minor approach)

### **Warrant 3: Peak Hour**

- A. Peak-Hour Conditions (Minor delay -- and-- minor volume --and-- total volume) --or--
- B. Peak-Hour Vehicular Volumes (Both major approaches --and-- higher minor approach)

### **Warrant 4: Pedestrian Volume**

- A. Four Hour Volumes --or--
- B. One-Hour Volumes

### **Warrant 5: School Crossing**

- Gaps Same Period --and--
- Student Volumes
- Nearest Traffic Control Signal (optional)

### **Warrant 6: Coordinated Signal System**

- Degree of Platooning (Predominant direction or both directions)

### **Warrant 7: Crash Experience**

- A. Adequate trials of alternatives, observance and enforcement failed --and--
- B. Reported crashes susceptible to correction by signal (12-month period) --and--
- C. 56% Volumes for Warrants 1A, 1B, --or-- 4 are satisfied

### **Warrant 8: Roadway Network**

- A. Weekday Volume (Peak hour total --and-- projected warrants 1, 2, or 3) --or--
- B. Weekend Volume (Five hours total)

### **Warrant 9: Grade Crossing**

- A. Grade Crossing within 140 ft --and--
- B. Peak-Hour Vehicular Volumes
