

Santa Fe County Volunteer Fire District Insurance Services Organization (ISO) Ratings

What is an Insurance Service Organization (ISO) Rating?

ISO collects information (such as nearest water supply, fire station, station staffing, number of personnel, number and type of fire trucks, pumping capacity, emergency communications, etc.) on municipal fire-protection efforts in communities throughout the United States. Based on the information a numerical rating is given to the area which is used by insurance companies to determine fire insurance premiums.

ISO considers three classes:

- The first class applies to properties within 5 road miles of a recognized fire station and within 1,000 feet of a fire hydrant or recognized alternate water supply.
- The second class applies to properties beyond 1,000 feet of a fire hydrant but within 5 road miles of a recognized fire station.
- *(if applicable)* The third class applies to properties beyond 1,000 feet of a fire hydrant and over 5 road miles of a recognized fire station.
